

**Features**

**Know where, first and more.**

- Control**

Infosight delivers the capability to monitor, analyse, characterise, assess, and visualise the Information Environment.
- Analysis**

Infosight automates the collection of OSINT into a single source of truth to support Information Operations and campaign planning activities.
- Efficiency**

Infosight means you no longer have to prioritise maintaining sufficient capability and capacity of resources focused on operations in the Information Environment .
- Solutions**

The volume, variety, velocity, and veracity of publicly available information, which contain critical insights amongst the noise, makes the Information Environment a big data challenge, which we solve.
- Dynamic**

Infosight exploits data to bring meaningful insight from the Information Environment to the operational space through the creation of dynamic Information Environment Assessments (IEAs).
- Flexibility**

Infosight allows analysts to operate with a greater range of input data sources and, through reporting tools, allows the exploitation and extraction of the information, enabling analysts to go from A to IEA in just a few clicks.
- Value**

To bring meaning to the noise, Infosight uses geospatial technologies to properly conceptualise, contextualise, understand, and deliver information to operators within unique environments for specific intelligence requirements.

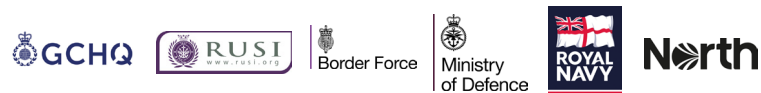

Information is a powerful tool and invaluable in support of military planning and operations.

With the advent of the internet, the expansion of information technology, the widespread availability of wireless communications, and the far-reaching impact of social media, today's Information Environment (IE) poses new and complex challenges for military operations.

Many state and non-state actors are now competing to gain advantage in the Information Environment , and today's adversaries are focused on identifying and exploiting vulnerabilities in our infrastructure, the information that flows within it, and the decision-making processes dependent on that information.

Our team has embedded intelligence operational experience within US and UK government and defence intelligence agencies, spanning five decades. Academics with advanced Geospatial data and intelligence analytic capabilities create a potent blend of tech-intelligence authority.

Infosight enables organisations to adopt, adapt, and develop new science and technology to operate effectively in the information environment.
